EDUCATION

University of Toronto	Sep 2025–June 2029
Bachelor of Science in Computer Science (pursuing) GPA: 3.7 International Merit Admission Award - \$50,000 scholarship	
North Toronto Collegiate Institute	Sep 2021–June 2025
Ontario Secondary School Diploma 96.4%	

SKILLS

Languages: C++, Java, Python, JavaScript, HTML, CSS, R
Frameworks: React.js, Node.js, Express.js, EJS
Other: Git, Full-Stack Web Development, Competitive Programming, Microsoft Office, JupyterHub, Network troubleshooting (Ethernet / Wi-Fi)

EXPERIENCE

UofT ResNet Technical Assistant	May 2026–Present
Responsible for troubleshooting wi-fi and provide IT services such as ethernet cables, USB-A or USB-C adapters, and eduroam connection for the following UofT residences: Chestnut, Oakhouse, Graduate house, and Knox.	
Peer Tutor	Jan 2022–June 2024
Tutored students ranging from grade 9 to 11 in Mathematics, Computer Science, and Physics. Focus was to improve their problem solving skills and academic performance.	
Web Team Co-President	Sep 2024–June 2025
Joined Web Team since grade 9, previously the back-end executive during grade 11 and offered the co-president role for grade 12. Managed and maintained the school website northtorontoci.ca, handling both back-end updates and front-end issues using Elementor.	

PROJECTS

UofT Student Life Tracker	June 2026-Present
Developing a full-stack web application using React to help University of Toronto students organize coursework, deadlines, and campus resources in a centralized dashboard.	
Transit Guardian	March 2026
- Developed a full-stack AI-powered safety monitoring system using React, FastAPI, and WebSocket to detect hazardous situations from live camera feeds. - Integrated YOLOv8-Pose to identify falls, aggression, erratic movement, crouching, and lying-down events. - Implemented real-time incident alerts with automatically generated video clips and AI-generated dispatch summaries using Google Gemini.	
Constellation Graph-Based Star Mapping Game	March 2026
- Developed an interactive astronomy-based game that models constellations as weighted graphs using real star catalog data (RA/Dec, magnitude). - Designed a “star hopping” system using Dijkstra’s algorithm with custom edge weights based on angular distance and visual difficulty. - Built a real-time Pygame visualization engine for rendering star fields, user interactions, and constellation overlays.	

ACTIVITIES

Hack the North	March 2026
IEEE x AWS: Hack the Student Life	March 2026
Top 500 of NCPA (Nexon Coding Challenge for Young Adults)	July 2023–July 2024
School champion for Waterloo Hypatia Contest (Grade 11)	March 2024
Certificate of Distinction for Euclid, Fermat, Cayley, Galois, Fryer, Pascal contests	2021 –2025
